

Susceptor Refurbishment

for Applied Materials P5000

Refurbishment of susceptors makes sense because some of the most expensive components have a very long life and may be reused many times, while only a few components get used up and require replacement. Thus refurbishment reduces cost by providing an increased materials efficiency.

Used susceptors are rebuilt to a virtually new condition, and ready to install. Critical components are replaced with new, and other parts are reconditioned. All assembly and packaging is done in a clean environment, so no special handling is needed prior to setup.

Quality assurance documents are provided with each susceptor for better tracking and control of materials.

Gilbert Technical is a provider of support products and services for semiconductor industry equipment.

COMPONENTS, NEW & REUSED	
Aluminum Plate	New
Ceramic parts	Cleaned
Thermocouple	New
Ground Cable	Recondition
Inconel hardware	Recondition
Other hardware	New
Packaging	Cleaned

- ✓ **Cleaned and ready to install**
- ✓ **Critical parts are replaced with new parts**
- ✓ **Life and performance equivalent to OEM**
- ✓ **Quality Documentation**

Quality products and services for the high technology industry.
